

FEDERAL BUREAU OF INVESTIGATION

Date August 7, 19641

On August 5, 1964, I received from SA JAY COCHRAN, FBI Laboratory, three cardboard boxes to be delivered to the FBI Laboratory in Washington, D. C.

I placed these three boxes in the freight bin of Delta Flight 614, Jackson, Mississippi, airport. These boxes had been given Delta tags 307-376, 307-377 and 307-378. I retained the stubs.

I personally observed the freight bin to be closed.

At the first stop, Montgomery, Alabama, August 5, 1964, I observed the packages were not removed.

At the Atlanta terminal, I personally removed the three boxes from the freight bin of Delta Flight 614 and I personally placed them in the freight bin of Delta Flight 720. I observed the freight bin to be closed before takeoff for Washington National Airport.

After arrival at Washington National Airport at approximately 3:00 p.m. on August 5, 1964, I personally removed the three boxes with the above numbered tags, matching the stubs in my possession and delivered these three boxes to GEORGE BERLEY in the FBI Laboratory. I retained the three tags from the boxes and the three stubs. The delivery was made to Mr. BERLEY at approximately 4:00 p.m., EDT, on August 5, 1964.

Date 8/8/64

Mrs. FANNIE CHANEY, [REDACTED] on August 6, 1964, furnished the following articles which belonged to her son, JAMES EARL CHANEY: *b7c*

- (1) One Silvertone Clock Radio which she advised had been handled inside by her son, JAMES EARL CHANEY.
- (2) One Gillette razor.
- (3) Pair green cotton trousers.
- (4) Pair grey twill cotton trousers.
- (5) Pair blue trousers.
- (6) Light blue dress shirt.
- (7) Brown figured sport shirt long-sleeved.
- (8) Light blue-black checkered striped dress shirt.
- (9) White, blue flowered figured sport shirt short-sleeved.
- (10) One blue plastic belt.
- (11) Blue, dull red, brown striped figured sport shirt.
- (12) Pair blue figured shorts.
- (13) White T-shirt lettered CORE.

On August 7, 1964, the following items were forwarded to the FBI Laboratory for appropriate examination via Air Express, Protective Signature Service:

- (1) Radio belonging to victim CHANEY.
- (2) Clothing of victim CHANEY obtained from victim's mother, including victim's razor and belt.
- (3) Rock found clutched in left hand of Body #2. This body has been identified as that of victim GOODMAN.
- (4) Twenty-four soil samples obtained from crime scene.
- (5) Cigar butt found adjacent to Body #3 on south side.
- (6) One exposed Kodak Tri-X film pack containing photographs of the completed excavation of the portion of the dam containing the victims' bodies.

Specimens received 8-5-64

Body #1

- Q64 Bullet from chest (Item #5)
- Q65 Trousers containing wallet with miscellaneous papers and money, belt, coins, cigarette lighter and two ball-point pens
- Q66 Undershorts (Item #3)
- Q67 - Q68 Pair of boots (Item #3)
- Q69 - Q70 Pair of socks (Item #3)
- Q71 Key ring with keys (Item #3)
- Q72 Hair samples (Item #6)
- Q73 Skin surrounding hole in chest (Item #7)
- Q74 Wedding ring (Item #4)

Body #2

- Q75 Blue shirt
- Q76 Bullet from chest (Item #11)
- Q77 Trousers containing wallet with miscellaneous papers and money (Item #10)
- Q78 Khaki shirt (Item #10)
- Q79 Undershorts (Item #10)
- Q80 - Q81 Pair of shoes (Item #10)
- Q82 - Q83 Pair of socks (Item #10)
- Q84 Hair sample (Item #12)
- Q85 Skin surrounding hole in chest (Item #13)

Body #3

- Q86 Bullet from back (Item #18)
- Q87 Bullet from abdominal wall (Item #19)
- Q88 Bullet from head (Item #20)
- Q89 T shirt (Item #16)
- Q90 Trousers (Item #16)
- Q91 Undershorts (Item #16)
- Q92 Skin surrounding hole in chest (Item #17)
- Q93 Hair sample

50-117

594

ALSO SUBMITTED: Ten fingers from Body #1 (Item #1)
Ten fingers from Body #2 (Item #8)
Ten fingers from Body #3 (Item #14)
Skin from feet Body #1 (Item #2)
Skin from feet Body #2 (Item #9)
Skin from feet Body #3 (Item #15)
Three film packs
Three rolls 35 mm film

Results of examination:

Specimens Q64, Q76, Q86 and Q88 are handload or reload type lead bullets comparable in weight and physical characteristics to caliber .38 S & W bullets. However, since these bullets do not appear to be factory loads, the possibility of their having been loaded into other revolver type caliber .38 cartridges cannot be eliminated. These bullets were fired from a weapon having five lands and grooves, right twist such as the caliber .38 Smith and Wesson, Hopkins and Allen, Harrington and Richardson, Iver Johnson, Empire State Arms Company, U. S. Revolver Company, Chicago Arms Company, Merwin and Hulbert, National Arms Company revolvers and possibly some foreign weapons.

Specimen Q87 is comparable to caliber .38 S & W commercially loaded lead bullets. This bullet was fired from a weapon having seven lands and grooves, right twist such as the caliber .38 Enfield, Webley, and Webley-Fosberry English revolvers and possibly other weapons. The caliber .38 S & W cartridges will chamber in these weapons.

Specimens Q64, Q76 and Q86 were identified as having all been fired from the same weapon. It was not possible to reach a conclusion whether specimen Q88 had been fired from the same weapon as specimens Q64, Q76 and Q86 possibly due to the mutilation of comparable areas on these specimens.

All five bullets have microscopic markings remaining on their surfaces suitable for comparison with any suspect weapons recovered.

Powder residues and powder patterns in the area surrounding the hole in the skin, Q73, powder residues surrounding the hole in the left chest area, Q78, and powder residues surrounding the hole in the upper area of the T shirt, Q89, are similar to those produced by contact or near contact shots.

50-118

597

A slight black ring was found around a hole located in the right chest area of Q78. This area of this shirt was examined microscopically and chemically; however, no powder residues were found. This area surrounding this hole was also examined spectrographically; however, no metallic deposits were found that could be identified as bullet metal. Therefore, because of the absence of powder residue and metallic deposits, it was not possible to definitely ascertain whether or not this hole had been produced by a bullet.

All of the remaining areas surrounding the holes in Q65, Q66, Q75, Q77, Q78, Q79, Q85, Q89, Q90, Q91 and Q92 were examined; however, no powder residues were developed.

Specimen Q71 contains the following keys:

- 1 - Gas-cap key cut to the same code, bearing the same code number "L481" and the name "Meyer," as the gas-cap key found in the debris from the burned 1963 Ford station wagon
- 2 - Round headed Ford key bearing the same depth cuts as a key found in the debris from the burned 1963 Ford station wagon (This key fits and operates the rear deck lock previously submitted and obtained from this station wagon.)
- 3 - Flat key stamped "Art Steel Company N. Y. - N. Y." (This key appears to be for a metal cashbox or file box, cabinet, or desk.)
- 4 - "Yale" key cut to the same code as the small "Yale" key found in the debris from the 1963 Ford station wagon (This key has a "V" notch cut in the bow as did the key found in the station wagon.)
- 5 - Padlock type key (This is not an original key and therefore the make of lock cannot be determined.)
- 6 - House, office, or apartment door type key bearing the word "Ilco" number "1001 EN" (This key is also similar to house door, office door or apartment door lock type keys.)
- 7 - "Jeco Y6" cabinet, desk or similar type lock key (No keys similar to these three keys were found in the keys from the debris found in the 1963 Ford station wagon.)
- 8 - Ford key cut to the same code as the ignition and door locks from the 1963 Ford station wagon

50-119
598

A cloth tab, sewed to the Q79 undershorts, bears the name "ANDREW GOODMAN." No other visible or invisible laundry marks or other identifying marks were found on any of the items of clothing.

The items of clothing are described as follows:

<u>ITEM</u>	<u>SIZE</u>	<u>COLOR AND COMPOSITION</u>	<u>BRAND</u>
Q65	36 X 30	Blue cotton denim	Wrangler
Q66	Large	White cotton knit	Ohrbach's
Q67 - Q68	8D	Black leather, engineer's type	None discernible
Q69 - Q70	10	White wool	" "
Q75	16	Blue cotton	Beltex
Q77	31½ X 30	Black cotton twill	Lee
Q78	14½ - M	Khaki cotton	Big Yank
Q79	32	White cotton knit	B. V. D.
Q80 - Q81	9 D/B	Black leather	Bostonian
Q82 - Q83	Stretch type	Black synthetic	None discernible
Q89	Medium	White cotton knit	" "
Q90	29½ X 29½	Black cotton twill	" "
Q91	28	Red, black, gray print on white background. Cotton.	" "

The Q72 and Q84 hairs were determined to be of Caucasian origin. The Q93 hairs were determined to be of Negroid origin.

50-120

REPORT
of theFEDERAL BUREAU OF INVESTIGATION
WASHINGTON, D. C.

To: FBI, Jackson
Re: MURKIN

Date: August 13, 1964
FBI File No. 44-25708
Lab. No. PC-31326 12 DV

Specimens received 8-7-64

ITEMS FROM GOODMAN'S HOME

Q84 - Q86 Three pairs of trousers
Q87 - Q100 Four shirts
Q101 - Q102 Two T shirts
Q103 - Q104 Two pairs of undershorts
Q105 - Q107 Three towels
Q108 Ladies nightgown
Q109 Belt
Q110 Razor

Q111 Object found in Goodman's hand
Q112 Cigar butt

K27 - K50 Twenty-four soil samples from crime scene

ALSO SUBMITTED: Radio
Exposed film pack

Results of examination:

Negroid head hairs which exhibit the same microscopic characteristics as head hairs from body #3 and which could have come from body #3, were found in the pockets of Q84, Q85, Q86 and Q87 and on Q102. It is pointed out that except in unusual instances, hairs do not possess enough individual characteristics to be positively identified as originating from a particular person. No hairs were found in the pockets of Q88, Q89 and Q100 or on Q101, Q103, Q104. Nothing of value for identification purposes was found on the razor, Q110.

The trousers from body #3 had a 29 $\frac{1}{2}$ " waist and a 30 $\frac{1}{2}$ " inseam. The sizes of Q94 through Q96 are as follows:

Q94 28 3/4" waist X 31 $\frac{1}{2}$ " inseam
Q95 29 $\frac{1}{2}$ " waist X 29" inseam
Q96 28" waist X 28" inseam.

The Q103 boxer type undershorts and the boxer type undershorts from body #3 are both a size 32 and are alike in construction. The Q103 undershorts apparently were never worn. A price tag which reads "WIMBURN'S 32 2/100" is stapled to the waist of Q103. The Q104 undershorts are white cotton knit and are a size 34.

The T shirt on body #3 was too mutilated for accurate measurement; therefore, no size comparisons with Q101 and Q102 could be made.

Wear characteristics of the Q103 belt indicate a waist measurement of approximately 31". However, there was no belt on body #3 for comparison. There was no shirt on body #3 for comparison with the Q97 through Q100 shirts.

Nothing of apparent significance was noted about specimens Q103 through Q108 and Q112.

The Q111 object, thought to be a rock, is a lump of red-streaked gray clay coated with reddish-yellow sandy soil. This material is similar to the K27 clay and soil taken from near the left hand of body #2. The Q111 clay and soil could have come from the area represented by K27.

Specimens K36, K40 and K42 from 100 feet east, 100 yards east and 150 feet east of the pit on top of the dike have some characteristics similar to Q111 and cannot be entirely eliminated as possible sources. However, K27 is considered the most likely source for Q111.

No indication was found that the clay and soil of Q111 was acquired outside of the grave and dike area.

Specimens K28 through K35, K37 through K39, K41, K43 and K44 are clay soils of a type generally similar to K42 but are specifically different and are not the source or sources of Q111.

Specimens K45 through K50 are different from Q111 and the grave and dike soils and, therefore, could not be associated with any of these specimens.

VIII. DESTRUCTION OF THE CIVIL RIGHTS
WORKERS' 1963 FORD STATION WAGON

50-124

FEDERAL BUREAU OF INVESTIGATION

1

Date July 2, 1964

At approximately 1:32 p.m. on June 23, 1964, a 1963 Ford station wagon, bearing 1964 Mississippi license number H25503, located approximately 112 feet east of east end of concrete bridge over Bogue Chitto Creek. Car rear approximately 48 feet from north edge of Highway #21, headed north, in burned condition. No individuals in area or vehicles on highway.

FEDERAL BUREAU OF INVESTIGATION

Date June 26, 1964

1

A 1963 Ford Fairlane Ranch Wagon, medium blue, Vehicle Identification Number 3F38L106548, bearing 1964 Mississippi License H25503, was observed parked off Highway 21 in a wooded area approximately 15 miles northeast of Philadelphia, Mississippi, about 50 yards northeast of a bridge over Bogue Chitto Creek.

The station wagon was in a burned condition, the entire interior being burned to the metal, and the debris fallen to the floor of the vehicle. All tires and wheels, except left front, were burned and charred.

A metal name plate of dealer type reading "Castle Herkimer, NY" was observed on the tail gate door of the station wagon. A metal rack was attached to the top of the station wagon.

Paint on the exterior was scorched and burned off with the exception of portions of the hood, the left front fender, and left front door.

The paint on the body around the left front door was charred. The paint on the door around the hinges was charred; however, the paint on the remainder of the door, particularly around the handle and below the handle, had little fire damage.

The vehicle identification plate was attached to the left front door in the area below the latch and no appreciable fire damage was noted.

The ignition wires, distributor, water hoses, and battery appeared to have been damaged by the fire. The springs on the hood near the hinges were damaged. All windows were cracked or destroyed.

Door handles on left rear and both right doors were damaged as were braces which held the luggage rack on top of the vehicle.

No hub caps were located. The radio antenna, with fire damage at the base, was located approximately ten feet from its

On 6/23/64 at Philadelphia, Mississippi File # NO 44-2227

by SA [redacted] /eeb Date dictated 6/25/64

bjm

2

mounting place on the left front fender. A pair of pliers and a jack handle-lug wrench-type tool were observed in the luggage well. Usual other tools such as a jack and chains were not observed in the vehicle. Debris and ashes, particularly on the right side on the floor, were wet.

Ashes and debris around back wheels, spare and right front wheel indicated tires were burned while mounted on wheels.

The lock on the rear or tailgate door of the vehicle was open. No key was located.

With the assistance of SA [REDACTED] and Mississippi Highway Patrol [REDACTED] samples of ashes and debris were removed from the floor of the vehicle and placed in boxes. b7c

The undamaged area of the exterior of the vehicle was dusted for latent fingerprints and none were developed.

Damage to underbrush and trees around the vehicle appeared to be greater to the right side and rear of the vehicle than to the left and front of the vehicle.

The entrance to the wooded area where the vehicle was located was observed. No tire tread marks were visible. The ground was soft and moist to a degree that footprints could be made in the ground.

FEDERAL BUREAU OF INVESTIGATION

Date June 29, 19641

Early in the morning of June 24, 1964, SA's JAY COCHRAN, JR., and [REDACTED] from the FBI Laboratory, examined debris previously recovered from the victims' burned station wagon. b7c

The debris was initially examined to determine whether or not any human remains were present in it. The examination disclosed no human remains.

The debris contained pieces of glass, bits of fabric, glass wool insulation, pieces of plastic, portions of shoes, pieces of paper, metal automobile parts that had melted and solidified, screws, coins, pliers, a portion of a screwdriver, pencil ferrules, a man's metal heel plate with nails attached and numerous other items of no apparent significance.

All of the above items were badly damaged by fire. In addition, much of the debris consisted of burned materials too badly damaged by fire to be recognizable.

50-141

On 6/24/64 at Meridian, Miss. File # NO 44-2227
by SA's JAY COCHRAN, JR. and [REDACTED] /ldo Date dictated 6/28/64
b7c b22

FEDERAL BUREAU OF INVESTIGATION

Date June 29, 19641

On June 24, 1964, SA's JAY COCHRAN, JR., and [REDACTED] of the FBI Laboratory, conducted a search of the scene where the victims' vehicle had been burned. *b7c*

They first walked over the scene and immediate surroundings. Several oil and beer cans, a tobacco tin, a green plastic bottle, a Coca-Cola bottle, and a lighter fluid can were recovered. A piece of a leather boot with a name and a possible military serial number appearing thereon was also found near the scene.

Secondly, the area immediately surrounding where the burned vehicle had been setting to Highway 21 was thoroughly and painstakingly gone over with rakes. Nothing of significance was recovered from the raked area.

50-142

On 6/24/64 at Philadelphia, Miss. File # NO 44-2227
by SA's JAY COCHRAN, JR., and [REDACTED] *b7c* /ldo Date dictated 6/28/64

FEDERAL BUREAU OF INVESTIGATION

Date June 29, 1964

1

On June 24, 1964, the systematic search and examination of the victims' burned vehicle was begun by SAs JAY COCHRAN, JR. and [REDACTED] of the FBI Laboratory. *b7c*

Additional debris recovered from the vehicle by SAs COCHRAN and [REDACTED] was examined by them. Again, no human remains were found. This debris, for the most part, consisted of items similar to those in the debris previously recovered from the vehicle. However, two additional items of possible significance were found in the debris; namely, a wristwatch without strap or spring bar strap retaining pins and a ring of five keys, containing two Ford Motor Company car keys. *b7c*

The ignition lock and the locks from both front doors were obtained. The glove compartment lock was missing from the glove compartment door and was not recovered.

No bullet holes or indentations were found in or on the burned vehicle.

At this time the vehicle identification plate from the left front door together with its attachment rivets and the public vehicle identification number from the left front fender inside the motor compartment were cut from the car.

The plate number read as follows:

3F38L 106548

It also contained the following descriptive information:

Body	71D
Color	E
Trim	42
Date	10J
DSO	15
Axel-Trans	43

The public vehicle identification number from the motor compartment read as follows: 3F38L 106546

On 6/24/64 at Philadelphia, Miss. File # NO 44-2227 *50-143*

by SAs JAY COCHRAN, JR., and [REDACTED] *447*
esp b7c Date dictated 6/28/64

NO 44-2227

2

Immediately above the last "6" in this number (underlined above for emphasis only) was a very lightly stamped "8".

No tire chains were located within the car. In addition, the search did not locate a bumper jack. A combination jack handle and lug nut wrench was in the spare tire compartment as was the spare tire wheel.

Based on the window-winding mechanisms, the window positions at the time of the fire were determined to be:

Right front door	Down
Left front door	Down
Right rear door	Down
Left rear door	Up
Tailgate	Down

The right and left rear side window positions (if these windows are of the moveable type) could not be determined because of the extensive fire damage to the window channels. Other than small fragments, no glass remained in any of the window frames at the time of this examination.

Examination of the gas tank, which had become detached in transporting the car from the scene, disclosed no evidence of an explosion. The drain plug was found securely in place in the tank.

The car's odometer was completely destroyed by fire and no reading was possible.

The left front tire and wheel, not severely damaged by fire, had been removed from the car. The outside sidewall of this tire bore two parallel red marks near the rim. The rim portion showed fresh marks indicating recent removal of the wheel cover (hub cap). The three remaining wheels, still mounted on the car, were all badly damaged by fire. The fire discoloration in the rim areas of these wheels was not disturbed or marked in any way. This permits the conclusion that the three wheel covers on these wheels were either not on the car at the time of the fire or "popped" from the wheels due to heat expansion prior to the completion of the fire.

NO 44-2227

3

The internal and external condition of the vehicle and the fire patterns observed are consistent with those previously described by prior observers.

FEDERAL BUREAU OF INVESTIGATION

Date July 6, 19641

On July 4, 1964, SAs [REDACTED] and JAY COCHRAN, JR. took charred debris from the top of the victims' vehicle to be identified and examined for the presence of fire accelerants. b7c

50-149

On 7/4/64 at Philadelphia, Miss. File # NO 44-2227
by SAs [REDACTED] and b7c
JAY COCHRAN, JR. /esp Date dictated 7/5/64 b30

This document contains neither recommendations nor conclusions of the FBI. It is the property of the FBI and is loaned to your agency; it and its contents are not to be distributed outside your agency.

FEDERAL BUREAU OF INVESTIGATION

Date July 6, 19641

During the examination of the victims' station wagon on July 4, 1964, two badly damaged instruments were removed from the dash of this vehicle. These instruments were determined to be the fuel gauge and engine temperature gauge.

Preliminary readings for these gauges, based on heat discoloration of the damaged faces, indicate that the fuel gauge registered 3/4 full and the temperature gauge registered in the normal operation range at the time of the fire.

The vehicle's fuel tank was opened and the interior inspected. All of the fuel was consumed by fire, leaving extensive sooting. No accurate determination of the amount of fuel remaining in the tank at the time of the fire could be made; however, there is some suggestion, based on a soot line at one end of the tank, that the tank was approximately 1/2 full.

50-150

On 7/4/64 at Philadelphia, Miss. File # NO 44-2227
by SA JA. COCHRAN, JR./esp (mjh) Date dictated 7/5/64 631

FEDERAL BUREAU OF INVESTIGATION

1Date July 7, 1964

On July 6, 1964, [REDACTED] Swartzfager Ford Company, 420 20th Avenue, Meridian, Mississippi, made available to SA JAY C. COCHRAN, JR., a 1963 Ford Fairlane shop service manual. b7C

This manual reflects the fuel tank of the Ford Fairlane has a capacity of 16 gallons and that the two gauges in this vehicle, namely the fuel gauge and the engine temperature gauge, are actuated by a bi-metallic strip contained within the gauge. This bi-metallic strip contracts and expands with heat. The heating of the bi-metallic strip is produced by a varying electric signal initiated by the float system contained within the fuel tank.

The engine temperature gauge is operated in a similar manner, except that the electric signal is controlled by a thermostat installed in the water jacket in the engine.

It is concluded that any readings obtained from these two instruments, removed from the victims' vehicle, are completely unreliable, since the bi-metallic strip controlling the gauges' needles would be externally effected by the fire.

[REDACTED] based upon his experience [REDACTED] Ford and his experience with 1963 Fairlane automobiles that normal gasoline consumption for this vehicle would range between approximately 14 miles per gallon within the city to approximately 18 miles per gallon on the open highway. b7C

[REDACTED] there is no wood used in the construction or installation of the roof rack on the 1963 Ford Fairlane Stationwagon. (Note: Question asked in attempt to resolve presence of extensive charred woodlike material found on top of stationwagon.) b7C

[REDACTED] Roamer - Madan Watch Company, 16 East 40th Street, furnished the following information: *b7C*

The Roamer Watch manufactured by the Roamer Watch Company, SA, Solothurn, Switzerland, is just now being offered for sale in the United States.

The case numbers on the Roamer Watch are six digit numbers and he has no record of or knowledge of a watch bearing a five digit case number or one in the 59,000 series.

The six digit case number is inscribed on the inside of the back case panel and to his knowledge there never has been a number on the reverse of the watch except those numbers of the patents under which the watches are manufactured.

The case number is in fact a model number to denote which movements manufactured by the company will fit the particular style of case and hundreds or thousands of watches will bear the same case number.

A Roamer 17 jewel, water resistant, shock proof watch with a stainless steel back is a conventional watch. This watch he stated would have a power supply of approximately 36 hours when fully wound. The condition of the spring and the power supply remaining in a watch found away from the wearer would, of course, be dependent on the wearer's habit of winding.

The following models of watches were made available by [REDACTED] for photographing: *b7C*

T. HUDSON, who resides on Highway 21 near the Neshoba -
Kemper County Line

[REDACTED]

He stated that he owns a 1959 Chevrolet which has a
light chrome streak on the side.

At the onset of the interview, HUDSON advised that [REDACTED]
[REDACTED] he had seen the fire
from the burning station wagon belonging to the victims in this
case.

[REDACTED]

[REDACTED] related the fact that
he had seen a fire near the Bogue Chitto Creek bridge and had
not indicated knowledge of any other information relating to this
incident. He stated also that he was interviewed by a Special
Agent of the FBI and that he repeated this same information
on that occasion.

Date June 29, 1964

[REDACTED]

On Monday, June 22, 1964, [REDACTED]

[REDACTED]

[REDACTED] decided to go fishing.

[REDACTED] drove to the vicinity of Bogue Chitto River and parked their car on the right or south side of Highway 21 at the east end of the second cement bridge and estimated he arrived at approximately 5 P. M.

They then crossed the road and walked down the east or right side of a small road going toward the beaver dam on Bogue Chitto River [REDACTED] Shortly after leaving the highway he noticed a car which was burned, and he walked down the right or east side of this car and took a trail off to the right when he noticed that [REDACTED] had stopped to look at the car. He then came back and [REDACTED] was at the front of the car and opened the hood of the car. [REDACTED] noticed that there was smoke coming from under the hood apparently toward the rear end of the engine section. He went to the front of the car and looked in the car and thought the smoke was coming from some burning wires or something inside the motor. The hood, which [REDACTED] touched, was warm but not uncomfortably hot to the touch. He noted that the body part of the stationwagon was burned, and to his best recollection all the tires were gone.

[REDACTED] noted the door on the driver's side of the vehicle was open and about the only thing else he recalled was that there was a Mississippi license with the letter H on it. He did not recall the number.

[REDACTED] did not recall about the hub caps but as he recalled, the aerial was gone from the vehicle.

[REDACTED]

2

more than three weeks. [REDACTED] the car was badly burned, however, it was a stationwagon, and he believed it was a 1963 Ford.

[REDACTED] opened the hood of the car and that they observed that the motor was still smoking.

[REDACTED] there was an odor around the car which smelled like whiskey or alcohol of some form.

[REDACTED] in examining the motor they noticed it was barely warm.

[REDACTED] from his observation of the stationwagon he assumed that the car must have been burned from the rear toward the front since the back of the car was not smoking.

[REDACTED] in the back of the wagon he noticed a lug wrench and a spare tire rim and a lot of ashes.

[REDACTED] the license plate was burned so that the color was not visible, but he did see the letter H on the plate.

[REDACTED] noticed there was one tire on the left front side that was not burned. [REDACTED] could not recall seeing any hub caps on the car or on the ground at this time.

[REDACTED] the ground around the car was still wet from the rain but that he did not notice any debris or other items on the ground.

[REDACTED] asked [REDACTED] if he had seen the burned car and that [REDACTED] had remarked he had seen the car but had not stopped to inspect the car.

NO 44-2227

3

[REDACTED] did not take anything out of the car.

[REDACTED]

[REDACTED] had not seen anyone other than [REDACTED]
[REDACTED] at or in the vicinity of the burned car on June 22, 1964.

Date June 29, 1964

[REDACTED]

[REDACTED] recalled that on Monday, June 22, 1964, it rained in the afternoon. He thought the rain lasted for about two hours and it started about 2:30 P. M. It was still cloudy although not raining when he went to Bogue Chitto Creek to go fishing [REDACTED] arrived at the creek about 5 P. M.

[REDACTED] first fished for approximately 30 minutes under the cement bridge over Bogue Chitto Creek and then started down the river toward the beaver dam. [REDACTED]

[REDACTED] Just as he left the highway he noticed a burned stationwagon in the brush which he did not think was visible from the highway but he noticed that shortly thereafter.

He noted there was smoke coming from under the hood of the car on the left side. He walked to the front of the car and lifted up the hood which was warm but not hot. [REDACTED] could not determine just where the smoke was coming from, but it appeared to him as if it were coming from the back part and underneath the engine. He did not think there was anything burning in the motor section of the car but that the smoke was coming from under the engine.

[REDACTED] walked around the car and noted that the left door or the door on the driver's side was open. He noticed that the left front wheel had not been burned and stated it did not contain a hub cap. The car was completely burned out and the spare wheel was not in the tire well but on the platform in the rear of the vehicle. He noticed a tire iron in the depression in the rear section of the stationwagon. [REDACTED] there were no other tools that he observed.

[REDACTED] there was no odor of smoke that he could recall although he thought he smelled something like beer or whiskey, although he did not notice any cans.

FEDERAL BUREAU OF INVESTIGATION

1

Date July 2, 1964June 22, 1964

[redacted] at about 4:30 P. M. [redacted]
on Highway 21 to Bogue Chitto Creek where [redacted]
parked [redacted] east of the Bogue Chitto Creek on
the south side of Highway 21. [redacted] fished on this creek
under the bridge for approximately 30 minutes and during this time
approximately ten cars passed on Highway 21 but none of them slowed
down and no cars stopped in the area, and he did not see any
individuals either fishing or walking in the area during that time.
[redacted] crossed Highway 21, down off the
highway and at this time saw a burned out stationwagon, [redacted]
[redacted] in order to get to the stationwagon it was necessary to go
through a barb-wire fence, however, the gap between the posts
through which the stationwagon would have to pass was down on the
ground, and he recalls this wire had been down for at least three
weeks and maybe longer. [redacted] approached the
stationwagon on the right side [redacted]
[redacted] stopped and looked at the stationwagon and noticed
smoke coming out from under the hood in the vicinity of the rear of
the engine. [redacted]
[redacted] lifted the hood which was still warm and saw the
smoke but could not determine what was burning. [redacted] also
touched the radiator, and it was also warm.

[redacted] walked around the left side of the car, and
the door on the driver's side was open. [redacted] closed this
door and did not reopen it. [redacted] door was not burned as was
the rest of the stationwagon, and it was cool when he touched it.
[redacted] walked around the rear of the stationwagon and looked in the
rear window and saw a lot of ashes which were damp and then looked
in the well which holds tools and saw a lug wrench and two full

tire chains like those used in snow or mud. [REDACTED] definitely did not see a tire jack nor did he notice any other tools or anything else except ashes inside the stationwagon. [REDACTED] touched the back of the stationwagon, and it was also cool. [REDACTED] while looking into the stationwagon he smelled an odor like whiskey or beer around the stationwagon. [REDACTED] could not smell the smoke which he had seen. [REDACTED] while walking around the stationwagon he did not notice anything lying around the outside of the stationwagon nor did he see any footprints.

[REDACTED] first examination of the stationwagon took approximately five minutes. [REDACTED] went through the brush to the creek and went to the beaver dam to fish. [REDACTED]

[REDACTED] picked up three hub caps from the two rear wheels and the right front wheel which were lying on the ground, and hid them in some blackberry bushes approximately 25 feet from the front of the stationwagon, and he also took the side view mirror off the door and hid it in the blackberry bushes in some leaves in the same area as the hub caps. [REDACTED] the radio antenna was on the ground near the side of the stationwagon, and he left it there. [REDACTED] there was no hub cap on the left front wheel. [REDACTED] did not take anything else from the stationwagon and never entered the stationwagon at any time. [REDACTED] the only thought he had about the burned stationwagon was that it might have been purposely set on fire by someone because it would not run. [REDACTED] went to the highway and at the area just off the highway behind the stationwagon he noticed no tire tracks or footprints at all. [REDACTED]

[REDACTED] when they left the area of the burned stationwagon they saw no other vehicles parked nor did they see any individuals on foot in the area, and he does not believe any automobiles passed on the highway at the time they left.

1Date June 29, 1964

[REDACTED]

[REDACTED] Monday afternoon, June 22, 1964, he decided to go fishing on Bogue Chitto Creek and arrived there at approximately 5:30 P. M. He was alone and noticed only one other car parked in the area [REDACTED]

[REDACTED] parked his automobile on the north side of the east end of the bridge, walked across the road and down a faint road toward the creek. Just after he left the highway he noticed a car which had burned and thought it probably had belonged to some fishermen and had caught on fire.

He did not look the car over at all and did not observe any smoke around the vehicle or any tracks or prints of any kind. He turned off on a trail located in about the back part or middle of the car and did not pay any attention to the car as he passed.

[REDACTED] the only one he saw on the creek fishing was [REDACTED] and when he returned to the road and left the area he did not see anyone or any other cars parked in the vicinity.

[REDACTED] had not previously seen the car, and he had not had an occasion to travel on the highway in that particular area on Sunday, June 21, 1964, or Monday, June 22, 1964.

Date June 30, 1964

[REDACTED] drove to Highway 21 in Bogue Chitto Creek approximately 15 miles northeast of Philadelphia, Mississippi, to go fishing.

[REDACTED] parked [REDACTED] off the highway. [REDACTED] walked off the highway and saw a stationwagon, model and make unknown to him, which had been burned. He estimates this time at approximately 5:30 P. M., and he said he thought it probably belonged to some fisherman and had probably caught on fire.

He did not examine the stationwagon but walked on the right side of it to take a trail along the creek. [REDACTED]

[REDACTED] seen smoke coming from under the hood of the stationwagon and had lifted the hood and attempted to determine what was burning but could not. [REDACTED]

[REDACTED] had seen smoke coming from under the hood of this vehicle and had also looked over the stationwagon [REDACTED]

[REDACTED] again passed the burned out stationwagon without examining it [REDACTED]

2

[REDACTED] did not see any other vehicles either parked or coming down the road. He saw no other individuals either near this stationwagon or at the creek while he was fishing. He said when he left the scene of the burned out stationwagon [REDACTED] he saw no other vehicle or persons in the vicinity.

[REDACTED]

[REDACTED]

[REDACTED] knows of no other individuals who may have been in the area on Sunday, June 21, 1964, or Monday, June 22, 1964, who could possibly have seen the burned out stationwagon or the individuals who placed it there.

WASHINGTON, D. C.

To: FBI, New Orleans

Re: MIBURN

Date:

July 8, 1964

FBI File No.

Lab. No.

PC-81337 CC CW IS

BN AR

D-453088 HW

PC-81324 AR

PC-81331 AR GH

Specimens received 6/26/64, personally delivered by SA Vincent B. Coyle,
FBI, New Orleans, PC-81337 CC

- Q1 Plaster cast shoe print
- Q2 Plaster cast shoe print
- Q3 Men's burned wrist watch (listed in Lab #PC-81306 CW)
- Q4 Gas cap
- Q5 Left front car door lock
- Q6 Right front car door lock
- Q7 Ignition lock
- Q8 - Q13 Ring and five keys
- Q14 VIN (secondary), inside left front fender within motor compartment
- Q15 VIN identification plate and rivets, left front door
- Q16 Debris from under drivers seat
- Q17 Debris from rear floor, right side
- Q18 Debris from bed of trunk
- Q19 Debris from under left rear seat
- Q20 Debris from floor, front left seat
- Q21 Debris from rear floor, left side
- Q22 Debris from bed of trunk
- Q23 Debris, contents tire well
- Q24 Debris, contents tire well
- Q25 Debris from front floor, right side
- Q26 Piece of leather boot
- Q27 Large carton containing miscellaneous debris

Also Submitted: One package of items for latent fingerprint examination

Specimen received 6/29/64, PC-81324 AR (New Orleans Airtel 6/27/64)

Q28 Lock from tailgate of station wagon

Evidence personally delivered by SA Vincent B. Coyle, 6/27/64,
PC-81331 AR GH

Q29 - Q30 Two parts of car bearing Vehicle Identification Number
(VIN) 3F38L106546

Q31 Portion of front bumper bearing paint smears

Results of examination:

The outline of a bell-shaped design was noted in the heel portion of the Q1 cast. Similar designs are found in a number of different heels, including some heels manufactured by the B. F. Goodrich Company. Further identification of the design was not possible because the Q1 cast is not sufficiently clear for detailed examination. Heels made by the B. F. Goodrich Company are used on new shoes as well as for repair.

No design was noted in the Q2 cast so the possible make of heel or shoe involved could not be determined.

The Q2 cast is approximately $11\frac{1}{2}$ inches long which is the approximate length of a size 8 or $8\frac{1}{2}$ shoe. It is to be noted that the length of a shoe for a given size will vary with the style of shoe involved.

Due to the distortion in the Q1 cast, the length and approximate size could not be determined. It does appear, however, that the Q1 cast impression was made by a relatively small shoe.

The results of the examination of specimen Q3 were reported in FBI Laboratory report PC-81306 CW, dated 6/26/64.

The five keys attached to the key ring, specimens Q8 through Q13 are as follows:

One Yale cabinet or desk lock key.

One Ford car key having a round head.

One "Meyer" gas cap key bearing code number L481.

One "P & F Corbin" housedoor or office door lock type key.

One bow portion of a Ford car key. The bit end of this key is missing and appears to have melted from the heat of the fire.

The "Meyer" gas cap key is cut to the code of the gas cap lock, Q4, and is made to operate this lock.

Because the bit end of the ignition type Ford key is missing, no conclusion could be reached whether this key originally fit any of the car door locks and ignition lock submitted.

662
50-179

The left front door lock, Q5, bears the code number "FE 519."

No portions of a key were found in any of the locks submitted.

The roundhead Ford key on the ring of keys Q8 through Q13 has been cut to the code of the lock Q28 and operates this lock.

The VIN identification plate and rivets Q15, are identical to authentic serial plates and rivets found on Ford cars. None of the numbers in Q15 have been changed or altered.

Nothing was found to indicate that any of the vehicle identification numbers in Q14, Q29 and Q30 had been changed. Above the last number "6" in Q14 is a faint impression of a number "8."

Chemical examinations were made of specimens Q16 through Q25 and Q27. No traces of petroleum hydrocarbons or other flammable fluids were identified in this debris.

No evidence of human remains was found in the debris, specimens Q16 through Q25 and Q27.

The portion of a name "William J" and a portion of a service number which appears to be US53260" are hand printed on the piece of a combat boot, specimen Q26. Specimen Q26 is not burned and appears to have been exposed to the elements for some time. A photograph of the characters on specimen Q26 is being furnished herewith.

Burned pieces of compressed wool and cotton fibers were found in specimens Q17, Q20, Q21, Q25 and Q27. This material appears to be from a fiber mat.

Burned pieces of knitted cotton fabric were in specimens Q18, Q23, Q24 and Q27. The source of this material is not known.

Small burned pieces of cotton fabric woven with a plain weave were found in specimens Q18 and Q23. This material appears to be a muslin type of cloth.

Insulating material composed of compressed glass fibers and filler was found in specimen Q22.

A piece of fabric woven with a plain weave and composed of what appears to be glass fibers was in specimen Q24. Although the source of this fabric is not known, it may be insulating material.

6661
50-180

XERO COPY XERO COPY XERO COPY

Specimen Q31 bore two separate paint smears. One smear was a white enamel and the other smear was predominantly a green enamel. Detailed analyses of these two paint smears revealed them to be similar in colors and compositions to "Sage Green" and "De Soto White" original finishes used on two-tone 1956 De Soto automobiles. Both of these paints are in positions on the 1956 De Soto which would make them simultaneously available for bumper contact.

Very small traces of a beige or light tan paint, adequate only for general color comparisons were found crushed along one edge of the green enamel smear.

REPORT
of theFEDERAL BUREAU OF INVESTIGATION
WASHINGTON, D. C.

To: FBI, New Orleans

Re: MIBURN

Date: July 8, 1964
FBI File No.
Lab. No. PC-81363 GH

Specimens received 7/1/64

Q32 - Q34 Three pieces of barbed wire from fence at the scene
where vehicle burnedK1 Paint sample of left front fender of 1963 Ford station wagon
K2 Paint sample from splash pan below left headlights of 1963
Ford station wagon

Results of examination:

Specimen K1 contained three-layered paint chips as
follows:

1. Blue metallic top layer
2. Grey primer
3. Brown primer

Specimen K2 contained two-layered paint chips as follows:

1. Blue metallic top layer
2. Red-brown primer

The three pieces of barbed wire, Q32 through Q34, bore foreign paint smears. The paint comprising these smears was a turquoise nonmetallic lacquer. This turquoise nonmetallic lacquer is similar in color and type of paint to the original finish on 1956 Chevrolets known as "Twilight Turquoise."

No paint was found on Q32 through Q34 which was like the paint of specimen K1 or K2.

REPORT
of theFEDERAL BUREAU OF INVESTIGATION
WASHINGTON, D. C.

To: FBI, New Orleans

Date: June 26, 1964

FBI File No.

Re:

Lab. No. PC-81306 CW

MIBURN

Specimens received 6/26/64

Q3 Men's burned wrist watch found in burned Fairlane
station wagon

Results of examination:

The back of the watchcase, specimen Q3, bears the brand name "ROAMER" under which appears "59183" which is apparently the watchcase number. The back of the watchcase also bears the following markings:

SWISS MADE
WATERPROTECTED
SHOCKPROTECTED
STAINLESS STEEL BACK

The wrist watch movement bears the following markings:

ROAMER
17 JEWELS
SWISS MADE

There is no record of specimen Q3 in our National Stolen Property Index. The wrist watch movement does not bear a serial number and there are no identification markings scratched into specimen Q3 to indicate that it had been repaired.

The mainspring of the wrist watch is approximately half wound. The inside of the wrist watch is dirty and rusty so that the cause for the stoppage of the works is not known.

The hand fragments attached to the watch are in the 12:45 position.

Specimen Q3 is being temporarily retained in the Laboratory.
